

Master Plan Facilitator Kit

Session Guides + AI Builders

- 2-Page Strategy
- 1-Page Plan
- The Playbook

Frontier
Framework
Powered by **RDM**

Part 1 of the Frontier Framework

This Facilitator Kit represents Part 1 of the Frontier Framework, a complete operating system designed to help leaders think clearly, decide confidently, and execute with discipline. This first phase focuses exclusively on planning. It will equip facilitators to guide strategic sessions that produce clear direction, focused annual priorities, and structurally sound planning outputs.

This kit is built to help facilitators process high-standard planning work. The tools, guides, and AI builders are designed to translate raw strategic thinking into consultant-grade planning documents—without diluting leadership responsibility or over-facilitating decisions. When used as intended, this system allows a facilitator to move leaders from discussion to documentation with clarity, credibility, and discipline, setting the foundation for effective execution in the next phase of the framework.

Master Planning

Part One of the Frontier Framework

Most strategic plans fail for one of two reasons:

- There are gaps in their content and quality.
- They are too vague and don't produce executable clarity.

When strategic direction, annual priorities, and execution are blended together, plans have no power. Decisions become unclear, focus erodes, and teams are left without executable guidance. This kit separates planning into three distinct documents, each with a single responsibility. Built in order and used together, they create clarity that holds up under real execution.

2-Page Strategy — The Why

Defines long-term strategic direction and decision logic. This is the strategic source of truth.

Includes High-standard:

- Vision Statement, Mission Question, Target Market Summary, Core Activities, Core Values, Origin Story, Brand Tagline, Elevator Pitch

1-Page Plan — The What

Defines annual focus by compressing strategy into time-bound targets and pathways. This plan forces tradeoffs, protects focus, and makes success clear and measurable.

Includes High-standard:

- Long-Term Objectives with 15–20 Key Results, Annual Objective with 3–5 Key Results

The Playbook — The How

Defines how work actually gets done. This is the operating system. This is where strategy comes to life.

Includes High-standard:

- Activity Map, Key Responsibilities, Key Roles, Core Process Menu, Work Score Metrics

Why This Structure Works

Each document does one job. The 2-Page Strategy sets direction. The 1-Page Plan sets focus. The Playbook enables execution.

No overlap and no dilution. Together, they create a planning system leaders can trust and **teams can run** without constant clarification.

The Reaction Draft Method™ (RDM Thinking)

You don't need a new idea, better advice, or chaotic meetings with your team. You need a confident approach to think, plan, and decide with consistency and clarity.

This kit uses a strategic thinking approach I call RDM Thinking™ (Reaction Draft Method).

RDM Thinking™ is built on a simple but critical insight: the best strategic thinking and decision-making does not start with a blank whiteboard, blue skies, and new ideas. It starts with disciplined inquiry crafted in proven frameworks that harness your current reality into a high-standard, decision-ready output... and fast.

Because it is question-centric, it works for any leader, in any size of operation, in any industry. The questions aim at a framework, the answers aim at your reality.

Instead of asking leaders to figure out how to run effective planning sessions or stare at blank pages writing up documents, RDM Thinking™ produces a Reaction Draft—a solid, high-standard starting point that leaders can react to, refine, and own. It keeps your energy where it matters while ensuring thinking, planning, and decision-making are faster and better.

The value of this process is that **it removes unnecessary stress and pressure from planning sessions and meetings**, freeing leaders to focus on the moment at hand instead of needing to be a strategic planning consultant.

RDM Thinking™ was developed in practice, not theory. It emerged from real-world planning, facilitation, and leadership across environments ranging from solo operators and growing nonprofits to complex, eight-figure organizations, informed by professional training in inquiry-based leadership, performance measurement, and professional coaching. Over more than 15 years, I've refined and used this approach through leading teams, stewarding organizations through growth and uncertainty, and facilitating sessions that had to produce decisions—not just discussion.

RDM Thinking™ is the foundational method used to plan every element of the Frontier Framework.

Once you develop this skill, you'll never plan the same way ever again.

HOW TO USE YOUR KIT

This kit helps leaders facilitate and produce clear, high-standard planning documents by using the Reaction Draft Method. The system is simple, repeatable, and thorough. When followed as designed, it produces consultant-grade outputs while preserving human judgment where it matters most.

This kit includes Strategic Session Guides and AI Builders designed to work together as one planning system that produces your three planning artifacts:

- **2-Page Strategy** — Strategic direction and decision logic
- **1-Page Plan** — Annual focus and measurable priorities
- **The Playbook** — Operational clarity and execution structure

Step 1 — Strategic Inquiry (Facilitator Session Guides)

- Set aside focused, uninterrupted time
- Work through the question sets completely
- This is strategic thinking, not speed work

The questions are designed to evoke insight, unlock multiple realms of thinking, and direct inputs toward the specific planning artifact being built.

Step 2 — Reaction Draft (AI Builder)

- Upload or paste your completed guide, notes, or session transcript into the Builder
- The Builder generates a Reaction Draft in a high-standard format

The Builder does not invent strategy or replace judgment. It structures and elevates your thinking into a high-standard Reaction Draft that evokes focused thinking.

Step 3 — Execution Draft (Human Judgment & Expertise)

- Review and revise the Reaction Draft
- Make the judgment calls and make revisions that produce your Execution Draft

This step can happen inside the Builder or offline. Responsibility remains with the leader or facilitator to establish necessary revisions to produce the Execution Draft

Pro Tips:

- Quality in = quality out.
- AI supports synthesis; it does not replace leadership or nuance.
- Treat every output as a Reaction Draft. You own the final decisions.

Move slowly. Think deeply. Let the system do the structural lifting—then apply the final layer of human judgment and get to work.
